Thus, the present study provides a comprehensive optimal bidding strategy to determine the optimal power bids of a multi-carrier microgrid despite the interdependency of power and gas ...

Microgrids could lower their costs in the day-ahead market through bidding in a smart distribution network. The bidding dilemma is difficult because there are many uncertainties.

Abstract--This paper proposes an optimal bidding strategy in the day-ahead market of a microgrid consisting of intermittent distributed generation (DG), storage, dispatchable DG, and price ...

In this paper, the optimal stochastic bidding strategy in joint energy and AS (regulation up and regulation down, spinning reserve and non-spinning reserve) market is modeled.

This part formulates an optimal microgrid bidding strategy (MBS) scheme to acquire the optimal power of a microgrid (MG) in the day-ahead (DA) and real-time (RT) markets, considering the ...

Considering the uncertainty of renewable energy generation within microgrids, a two-layer energy management bidding strategy based on risk indicators is further proposed.

The proposed bidding strategy involves day-ahead microgrid uncertain net power scenarios generation and reduction, and bi-level stochastic bidding optimization model.

This paper proposes a novel framework for conducting sealed-bid double auctions in power trading for multi-microgrid networks, addressing the critical challenge of jointly optimizing bidding decisions and ...

This paper proposes a stochastic strategic bidding approach for a multi-energy microgrid (MEMG) to optimize its participation across electricity, thermal energy, and hydrogen markets.

Thus, the present study provides a comprehensive optimal ...
