The 40 MW solar power plant, strategically located within the Arctic Circle, lies approximately 1,000 kilometers north of Oslo and just 30 kilometers from the Russian border, ...

Yet solar power has been increasingly taking hold above the Arctic Circle, in particular among indigenous communities with some of the strongest motivations to become energy ...

By testing and proving hybrid solutions at Isfjord Radio and elsewhere on Svalbard, and making these a "best practice" for Arctic energy transition, Store Norske Energi hopes to accelerate the introduction ...

Not only was it Norway's National Day, it was also the first full 24-hours when solar panels produced all electricity demand for the adventure basecamp, some 50 km west of ...

In the remote Svalbard archipelago of Norway, situated in perpetual winter darkness, a ground-breaking project has been completed: the installation of the world's northernmost ground solar panels.

Discover how a 16 kW solar system polar expeditions defied -50°C winters, replaced diesel generators, and powered Arctic science with snow-slapping panels & frost-proof batteries.

Located just 100 km below the Arctic Circle, the 95-hectare site will host approximately 120,000 solar panels. The project will be connected to already existing wind turbines, forming a ...

Producing PV electricity where the sun doesn't rise for several weeks? What may sound crazy at first is actually possible--with state-of-the-art solar technology from Fronius.

This paper looks at the potential for solar power in the North American Arctic, using northwest Alaska as a case study. Admittedly, the villages in this region vary considerably.

Explore how solar panels perform in extreme cold and polar night, unlocking the potential of Arctic solar
