-----

Mobile carriers are very slowly getting better at detecting and blocking scam texts, but it seems the fraudsters may still be staying ahead of the game. Scammers are now using a technology ...

When most people think of surveillance, they picture cameras on street corners or software scraping social media. But there's a quieter, more powerful tool that federal agencies ...

Well, not a real cell tower. I'm talking about fake cell towers. It sounds like something out of a spy movie, but I assure you, it's very real. These devices, also known by less-than-friendly ...

Increasingly, though, criminals are using a stranger and more dangerous method: fake cell towers on wheels. These devices, often called SMS blasters, allow attackers to send thousands ...

Far from science fiction, these devices are real, stealthy, and more widespread than most people realise. Fake cell towers, often referred to as IMSI Catchers or Stingrays, are devices that...

ICE's use of fake cell towers and StingRays is real, documented, and occurring with some frequency. On its face, such technology can help law enforcement track dangerous suspects or ...

Cybercriminals are now using portable fake cell towers to flood users with scam text messages. How it works and how to protect yourself.

In recent years, North Korea has deployed thousands of so-called IT workers to infiltrate Western businesses, get paid salaries, and send money back to support the regime. As the schemes ...

Fake cell towers pose as legitimate cell sites. They are made up of unauthorized devices that trick nearby phones into connecting to them instead of connecting to a genuine network.

Sources indicate that these portable base stations are tricking cellular networks into believing they're

# Are cell towers legitimate

legitimate towers. This enables scammers to target individuals directly, resulting in ...
