The AGLC tracks the load on the generator set at all times and starts the ramp at the load on the set, eliminating any bump and providing smooth transfer of power, whether loading or unloading.

The utility model discloses automatic load and unload equipment for generators, which comprises a plurality of parallelly arranged load and unload rails and an electric collecting and...

When the transfer is completed the single-pole, double-throw Utility Unload contacts will open. These contacts are used to initiate an automatic separation from the utility.

Vilion's independently designed PCC auto on-off grid switching cabinets offer a power range from 75 kVA to 375 kVA, featuring millisecond-level rapid response capability to provide users with a ...

Generator Control is an integrated solution developed to cover all the control requirements of small to large generators for hydro, industrial and utility power plants.

The Automatic Power Transfer and Load Control (APTL) is used to eliminate power bumps or surges at the moment of connecting or separating a local generator system from the utility.

2.1 The selector switch on the operation screen will be placed in "automatic" (AUTO) position. 2.2 When the electric supply stopped, the first generating set will self-start firstly. (can also be manually).

It automatically manages loading/unloading and ensures bumpless transfers when paralleling generators. Key features include Base Load and Unload Ramp settings, both easily adjustable from ...

Power Requirements ac or 230 Vac power, either 50 or 60 Hz. The power supply must be uninterrupted while the AGL is being used in the generating system. The AGLC may be connected
