Our technologies offer real flexibility to grid operators, allowing them to store solar or wind energy when demand is low, and draw on the stored energy at times of peak demand. We're ...

Europe's largest grid battery project has completed the first phase of 400 MWh energy production, marking a significant milestone in Belgium's energy independence goals.

The project comprises of the following four components: (i) Sub-transmission and distribution network reconstruction, reinforcement, and operations efficiency in the major load centers of Hargeisa; (ii) ...

The flow battery system, on a 20,000 m² site, will be able to store energy for hours or even days, to maintain grid stability during periods of low wind and solar output, FBE said.

Belgium's energy minister visited the site of a large-scale lithium-ion (Li-ion) battery storage project, a few days after attending the inauguration of a vanadium flow battery system.

ENGIE has started building one of Europe's largest Battery Energy Storage Systems (BESS) at its Vilvoorde place in Belgium. The project, authorised in July 2023 and selected for ...

The inclusion of flow batteries in the Battery Passport will allow industrial actors to provide valuable information on the environmental impact of production and use, including carbon footprints.

The largest battery energy storage system in mainland Europe has gone live in Belgium, as Sungrow and ENGIE completed the first 400MWh phase of the 200MW/800MWh Vilvoorde project.

Europe's energy storage market is expanding at an unprecedented rate. According to industry reports, the continent's battery storage capacity could surpass 100 GW by 2030. This growth ...
