China installed a record 315 GW (AC) of new solar capacity in 2025, lifting cumulative installed PV capacity to 1.2 TW and pushing non-fossil power sources past thermal generation for the ...

China's solar generating capacity is expected to surpass coal for the first time this year, according to the country's top electricity industry group, marking a milestone in the country's ...

China's solar energy production is reaching simply staggering levels, dragging energy costs down around the globe.

China's approach to renewable energy buildout combines large-scale investment, technological innovation and market reform. China is installing more renewables than any other ...

China's solar ambitions are emblematic of its broader race toward a green energy future, driven in part by Beijing's interest in becoming less reliant on imported oil and natural gas.

The China PV Industry Development Roadmap (2024-2025) covers various aspects of the photovoltaic (PV) industry chain, including 76 key indicators such as polysilicon, PV cells and ...

China had a key role to play in the world's rapid expansion of renewable power generation capacity last year, the International Energy Agency said. It more than doubled solar photovoltaic ...

China's solar power sector saw steady expansion in 2025, contributing significantly to the growth of the nation's overall power generation capacity, according to data released Wednesday by ...

BEIJING: China added record amounts of wind and solar power capacity in 2025, while polluting coal and gas power also surged, according to data released on Wednesday (Jan by its ...

China promotes solar photovoltaic power generation

To meet China's goal of carbon neutrality by 2060, substantial investment in upgrading power systems needs to be made to optimize the deployment of new photovoltaic and wind power ...
