Solar capacity additions set new records due to a rush before a June policy change, with 212 gigawatts (GW) added in the first half of the year. This rush means solar is likely to set an annual ...

Guided by its goals of peaking carbon emissions before 2030 and achieving carbon neutrality by 2060, the country is rapidly reshaping its power system to accommodate a new ...

While some point to China's continued construction of flexible coal fired power plants (designed to balance VRE), they ignore that China's imported oil use in transport probably peaked in 2024, a ...

China highly values the new energy sector, such as wind and solar power, rolling out an array of favorable policies spanning pricing, finance and industry. The supportive measures, ...

(Yicai) Dec. 16 -- China will add more than 200 million kilowatts of new wind and photovoltaic power generation capacity next year as it accelerates the green and low-carbon transformation of its energy ...

China's PV industry has established a preliminary policy system. Industrial policy is lagged compared with the market development. Reducing carbon footprint of PV products is critical for policy ...

China installed a record 315 GW (AC) of new solar capacity in 2025, lifting cumulative installed PV capacity to 1.2 TW and pushing non-fossil power sources past thermal generation for the ...

Last year, China reached a target to bring total wind and solar generating capacity to 1,200 GW six years ahead of schedule, reflecting what analysts said is its penchant for setting goals it...

China's solar energy production is reaching simply staggering levels, dragging energy costs down around the globe.

China s latest solar power generation policy

China's solar generating capacity is expected to surpass coal for the first time this year, according to the country's top electricity industry group, marking a milestone in the country's ...
