Cao Renxian, founder of Sungrow Power Supply Co., has built a dominant position in the global energy transition with industrial-scale batteries, making him one of China's richest men.

China's new policy pays large-scale batteries to backup the grid, leveling the playing field with traditional coal power.

China already has the world's largest battery energy storage fleet - some 40% of the global total - driven in part by local government mandates for developers to add storage to wind and...

The facility supports more than 30 local wind and solar power stations, alleviating the impact of intermittent supply and facilitating the integration of high shares of renewables into the grid.

How has China's electricity landscape changed? Over the past decade, the costs of renewables and battery storage have decreased substantially, peak-time residential and commercial ...

Leveraging its robust supply chain, government-backed innovation, and large-scale production capabilities, Chinese manufacturers lead the way in providing cutting-edge lithium-ion ...

China is set to have more solar power capacity than coal for the first time this year, marking a "historic" milestone in the country's energy transition. Data released on Monday by a ...

Chinese researchers have built a solar redox flow battery (SRFB) that can harvest sunlight and store energy at the same time, while reaching a solar-to-electricity conversion efficiency ...

Falling costs of storage and need to tailor output of solar is encouraging China PV giants to double up on solar and batteries, and build the projects themselves.

Chinese renewable generation reached 366 terawatt-hours (TWh), making wind and solar the country's largest

China solar power to battery

sources of new power. This transformation has also driven the rise of new ...
