Test instruments intended to evaluate a 4G smart phone must not only emulate the transmit and receive characteristics of a 4G base station, but environmental conditions as well, such as signal fading and ...

Discover the importance of base station testing in ensuring reliable wireless communication.

Anritsu's Signaling Testers, also known as base station simulators, support a wide range of communication standards including 2G, 3G, 4G (LTE/LTE-A/LTE-A Pro) and 5G.

This application note provides information that will help you migrate from 2G/3G BTS receiver testing to 3.9G and 4G base station testing. Various receiver conformance test requirements will be explained, ...

BS Type 1-C operates in frequencies below 7.125 GHz and has a traditional antenna interface. These base stations can be measured conductively by connecting a cable to the base ...

With this software, users can remotely control and demo tests on base stations quickly and easily. It also provides the SCPI commands required to implement each test in user-defined test programs.

The Signalling Tester MD8475B is an all-in-one base station simulator supporting LTE, LTE-Advanced, W-CDMA/HSPA/HSPA Evolution/DC-HSDPA, GSM/GPRS/EGPRS and TD-SCDMA/TD-HSPA. It ...

The Signalling Tester MD8475B is an all-in-one, high-performance base station simulator supporting various mobile communications technologies ranging from 2G to LTE-Advanced.

The base station simulator is capable of analyzing and generating LTE (LTE-M, NB-IoT) and NR (5G) signals for testing subscriber terminals of cellular communication systems 4G/5G.
