However, there are signs of improvement. The Midwest currently generates less energy from rooftop solar than any other region, but that is not for lack of potential. In most of the Midwest ...

With improvements in solar conversion efficiency, the rooftop potential in the country could be even greater. Residential and other small rooftops represent about 65% of the national rooftop potential, ...

Small-scale solar energy - of which rooftop solar is the largest component - is growing rapidly in the U.S., producing 10 times as much power in 2022 as a decade earlier.

There are now 5.26M US homeowners with solar on their roof totaling 40.9 GW of power; this is close to the cumulative capacity of all solar in Texas¹. Each year we see hundreds of thousands of new ...

BOSTON -- In 2022, small-scale rooftop solar produced enough energy to power 5.7 million typical American homes, a tenfold increase over the last decade. That's according to Rooftop ...

While our commercial and community solar outlooks have risen slightly due to enhanced project pipeline visibility, we've downgraded our residential outlook as tight module availability is ...

This story has been updated to revise the data on solar that is paired with battery storage, which reflects changes that Lawrence Berkeley Lab made after initial publication.

There remains large untapped potential for further solar penetration in the U.S., particularly for rooftop systems that do not occupy land that could be used for other purposes.

Rooftop solar power has transformed from a niche technology into a mainstream energy solution, with over 4.4 million American homes now powered by solar panels. As we enter 2025, ...

Current Status of Domestic Rooftop Solar Power Generation

In 2022, US small-scale rooftop solar saw a tenfold increase over the last decade, according to a new report - here's why and what needs to happen next.
