Czechia has significantly reformed its Energy Act, doubling the mandatory licensing threshold for small-scale solar and simplifying rules for co-located battery storage.

This event will bring together key stakeholders from across the region to explore the latest trends in energy storage, with a focus on the increasing integration of energy storage into ...

Yet national plans for 2030 still set renewable targets well below the EU average, risking a slowdown in progress. To maintain momentum, CE countries need to match solar growth with grid ...

The expansion of solar power has played a key role in this transformation. The installed capacity of solar photovoltaic (PV) plants has doubled since 2021, and the electricity surplus injected ...

The first green hydrogen electrolyzer powered by solar energy in the Czech Republic started in May 2023 with production capacity of about 100 kilograms per day / 8,000 kilograms of ...

This article explores how cutting-edge storage technologies are addressing grid stability challenges while unlocking new opportunities for businesses and communities.

An amendment to Czechia's Energy Act has raised the threshold for mandatory electricity generation licences from 50 kW to 100 kW for solar installations generating power for direct ...

The LEX OZE III law, which will take effect on October 1, 2025, officially recognizes energy storage as an independent business activity and allows battery systems to be directly ...

In recent years, the installed capacity of renewable energy sources such as wind and solar power in the Czech Republic has continued to rise. However, challenges to grid stability caused ...

Czech solar energy storage power generation

How can Czech organisations make the most of their renewable generation assets? Here's a review of energy storage in the Czech market.
