Communities across the U.S. -- from Iowa to Texas -- are leading the charge on clean energy, proving renewable power works everywhere, not just on the coasts.

Companies such as NextEra Energy-owned Florida Power & Light, the state's largest electrical utility, have for years patched together gigawatts of solar with small farms.

Solar energy development has been concentrated in the Atlantic and West regions of the United States, especially in California, North Carolina, and Massachusetts. These States are among ...

As the sun dips below the Pacific each evening, over 2 million solar panels along the Great Coast keep working - proving that in this coastal paradise, every sunset is really just a solar power handshake ...

With the Mojave and Sonoran Deserts receiving some of the highest solar irradiance on Earth, large-scale photovoltaic (PV) solar installations have been deployed.

These regions span deep blue West Coast states like California to red Great Plains strongholds like Oklahoma, proving once again that clean-energy deployment at the state level ...

This report summarizes the latest statistics on solar power capacity by state and highlights the top U.S. states in solar power generation.

The plan involves a solar array with a 1 MW capacity that will join an existing solar installation of 1.8 MW. However, solar power is not enough, considering that it's not reliable 24 hours ...

Now, a community-driven initiative is developing solar and tidal power to feed a microgrid. It would allow the island community to weather hours of outages, detached from the main ...

Does the Great Coast rely on solar power

These regions span deep blue West Coast states like California to red Great Plains strongholds like Oklahoma, proving once again that clean ...

While solar power is still a small part of the state's generation mix, it has grown rapidly over the past several years, beating out hydro as the state's largest source of renewable electricity.
