Did electric car sales boost the overall car market?

In spite of this, electric car sales did boost the overall car market, as sales of conventional cars stagnated. A total of 24 new electric car models were launched in 2024, increasing model availability by 15% compared to 2023, providing consumers with more choices and further increasing competition.

Are electric cars becoming more popular?

The United States has also established the "Zero Emission Transportation Association", aiming to make all new cars sold in the United States electric vehicles by 2030. However, the marketization of electric vehicles has become increasingly constrained by some factors in recent years.

What will EV sales look like in 2025?

This would mean electric cars account for 6% of all car sales outside of the three major EV markets in 2025, up from 5% in 2024. The strong growth seen in Southeast Asia and Brazil is expected to continue, reaching sales of more than 0.5 million combined in 2025.

What are the factors affecting electric vehicles?

These factors mainly include: The cost of battery use is too high and the service life is reduced with the increase of mileage,, the proportion of charging and swapping facilities is imbalanced, and there is a significant gap between the range of electric vehicles and fuel vehicles, .
