Wind and hydropower collectively contributed to over two-thirds of the total renewable electricity generation, representing 39.1% and 29.9%, respectively. The remaining one-third was ...

Wind and solar energy made up a record share of the European Union's (EU) electricity generation in the first half of 2024, overtaking fossil fuels for the first time, a new report has unveiled.

Turbines spinning in the wind and photovoltaic panels lit up by the sun generated 30% of the EU's electricity in 2025, according to an annual review. Power plants burning coal, oil and gas...

Wind and solar generated more electricity across the European Union than fossil fuels for the first time last year, according to Ember's newly released European Electricity Review. Wind and ...

Suggestions In order to boost low-carbon electricity generation, the EU should consider expanding existing nuclear, wind, and solar infrastructures. Drawing inspiration from success stories across ...

Wind and solar generated more EU electricity than fossil fuels for the first time in 2025, marking a "major milestone" in the transition to clean power.

Two decades ago, the European Union got basically none of its power from wind and solar. Now, those are the leading sources of electricity in the bloc. In 2025, wind and solar produced more ...

The EU's electricity transition reached a new milestone in 2025 with wind and solar generating more power than fossil fuels.

Wind and hydro power accounted for more than two-thirds of the total electricity generated from renewable sources (39.1% and 29.9% respectively). The remaining one-third of ...

European wind and solar power generation ratio

Together, wind and solar generated 30 percent of E.U. power last year, while fossil fuels provided 29 percent, according to the analysis from Ember, a think tank based in London.
