-----

This turbine consists of an undershot waterwheel floated on a water stream using a buoyant skid, and be anchored to the water bankside using some cables or hinged arms. By the way, ...

SPEARhydro is a first-of-its-kind floating hydro power plant that provides clean and stable electricity by harnessing the natural flow of rivers. We revolutionize the utilization of rivers by ...

The prototype development of an automatic and floating structured hydropower plant constitutes a pioneering initiative aimed at addressing the critical issue of energy scarcity in remote areas.

These turbines are designed and manufactured to provide a renewable source of electricity to inaccessible rural areas. The turbines have a float on top and are anchored and tethered ...

The turbine is constructed of a buoyant material to support itself on top of the water, thereby eliminating any drag from the apparatus. Electric power is produced from flow of water by means of a floating ...

The WESGen<sup>®</sup> comprises a family of low impact, high return, submersible power generation systems, ultimately capable of replacing traditional fossil fuel power stations with clean, green, energy sourced ...

What is the PicoStream? Is it right for me? What does it cost?

In contrast to other types of hydroelectric power stations (river and storage power plants), only the kinetic energy of the water flow in rivers or in the sea is used.

Join us in revolutionizing the energy landscape and contributing to a sustainable future. Embrace a cleaner, brighter world with our diverse range of renewable energy products.
