There do not appear to be any specific guidelines for the siting of wind turbines near aeronautical radio communication stations in the United States. Note that there are specific wind turbine guidelines for ...

Disclaimer: The Table of Frequency Allocations as published by the Federal Register and codified in the Code of Federal Regulations remains the legal source material.

We investigate the use of wind turbine-mounted base stations (WTBSs) as a cost-effective solution for regions with high wind energy potential, since it could replace or even outperform ...

Among wind load measurement tests, the wind tunnel test simulates the environment most similar to the actual natural environment of the product and therefore is the most accurate test method.

The experimental results show that the frequency spectrum of the total wind farm power follows a power law with a slope between  $-5/3$  and  $-2$ , and up to frequencies lower than seen for any individual ...

Wind farms can potentially interfere with radio signals across a wide frequency range by causing signal fading. Wind farm interference has the most significant impact at higher frequencies, especially the ...

In this paper, a distributed collaborative optimization approach is proposed for power distribution and communication networks with 5G base stations. Firstly, the model of 5G base stations considering ...

Our study introduces a communications and power coordination planning (CPCP) model that encompasses both distributed energy resources and base stations to improve communication quality ...
