Solar farms are set for a record stretch of power sector dominance in Germany after becoming the single largest generation source in the country at the earliest point of the year ever.

Photovoltaics produced more than 60% of Germany's electricity for several hours a day over the past week, as sunlight combined with new solar generating capacity helped accelerate the ...

Against this backdrop, Germany's cumulative renewable power capacity is forecast to reach 509.9GW in 2035, growing at a compound annual growth rate (CAGR) of 9.7% during ...

In the first half of 2025, Germany and many other European countries generated more solar power than ever before. This was offset by lower electricity generation from wind energy.

Far from being a sun-drenched country, Germany boasts one of the world's highest solar power outputs. The country triggered the large-scale launch of the technology with guaranteed feed-in tariffs in the ...

Concentrated solar power (CSP), a solar power technology that does not use photovoltaics, has virtually no significance for Germany, as this technology demands much higher solar insolation.

Germany installed 16.2GW of solar PV in 2025, according to an analysis by the Fraunhofer Institute for Solar Energy Systems (ISE) and based on the energy-charts data platform.

Wind power took first place as the strongest net electricity producer, followed by photovoltaics, which increased its production by 21 percent in 2025 and overtook lignite for the first time.

Photovoltaic systems have a significant share of electricity generation in Germany. In 2024, the Federal Network Agency announced a total electricity generation of 431.7 terawatt hours ...

Germany's artificial solar power generation

Explore how wind and solar power drive Germany's Energiewende, replacing fossil fuels and supporting climate neutrality goals.
