The following document is the final report of the study on "Per-missible PV penetration level in the Dominican distribution grids" and supported by GIZ and the Dominican Ministry of Energy and Mines.

Based on a grid assessment study (IRENA, 2019) carried out at the request of the Dominican Republic.

In a letter dated July 26, 2022, the Dominican Republic through the Ministry of Finance submitted a request for the extension of the closing date to November 30, 2022.

Finally, we identified the required steps the Dominican Republic's electrical system stakeholders should considered for improving the resilience of the electrical grid under extreme weather events, as well ...

The Minister also highlighted the additional services offered by BESS systems, such as frequency regulation and grid stabilisation, which contribute to balancing supply and demand in the short term ...

Rehabilitating electrical distribution circuits and upgrading electricity metering systems, may seem, at first sight, an undertaking which has little to do with citizen engagement.

The report also taps into global grid code best practices, and offers suggestions for streamlining and modernising the connectivity and operational criteria for both conventional and ...

The annex explores the country's success in mobilising \$85 million in climate finance, addressing grid capacity challenges, and supporting a renewable energy transition.

Government-backed reforms include strengthening the grid code to ensure reliable, affordable, and resilient electricity services; implementing effective mechanisms to improve the efficiency of ...

This initiative marks the first of three planned World Bank investments, supporting the Dominican

Grid modernization dominican republic nico

Government's vision for the sustainable development of the electricity sector.
