This study explores the design and adaptation of a shipping container into a portable irrigation control station for agricultural operations. The project leverages the ...

This study explores the design and adaptation of a shipping container into a portable irrigation control station for agricultural operations. The project leverages the structural durability and ...

The greatest merit of folding photovoltaic panel containers is their high degree of mobility, avoiding the large occupation of land by traditional solar power generation systems. ...

This research focuses on developing an intelligent irrigation solution for agricultural systems utilising solar photovoltaic-thermal (PVT) energy applications. This solution integrates PVT ...

SPIS have a high initial investment cost and need innovative financing models (or subsidies) to overcome this barrier to adoption.

These studies explore AV applications in diverse agricultural and climatic settings, ranging from Sweden's temperate climate with variable cloud cover to South Korea's subtropical ...

This paper reviews the use of semi-transparent PV technologies in AV systems, discussing major challenges such as reduced light availability, efficiency trade-offs and high costs.

Therefore, this study proposes a novel method for collecting rainwater from the surfaces of photovoltaic panels integrated with an irrigation system. For the case of validation of the study, water ...

Agrivoltaic systems, which combine crop production and photovoltaic power generation, offer a potential solution by increasing the productivity and land use efficiency. Agrivoltaic systems ...

High-efficiency photovoltaic container for agricultural irrigation from North Korea
