How do you test a PV inverter?

Open fuse holders to isolate PV strings. Test strings with string test set. Add one PV string at a time, and start up inverter to see if alarm occurs. If no alarm, turn OFF AC switches to disconnect from grid and add the next string. Turn AC switch on and start up inverter again Continue until you can find the string that triggers the alarm.

How to check the wiring from PV string pairs?

Referring to Figure 3-23, the wiring from the PV string pairs must be checked according to the following steps: Use a multi-meter to measure the PV strings' conductor ends and check the polarity. The positive (+) terminal of the conductor should match the positive (+) terminal of inverter's DC input.
