The pressure to accelerate Poland's energy transition is increasing because of the need to reduce emissions, ensure energy security, and maintain the competitiveness of the economy.

The rapid development of renewable energy sources is primarily driven by the increase in prosumer photovoltaic installations, fueled by government support programs. In 2023, renewable energy ...

This study investigates the rapid expansion of photovoltaic (PV) investments in Poland from 2015 to 2024, comparing the development of the PV market with other renewable energy technologies.

Poland is experiencing a rapid increase in the imbalance between electricity production and consumption patterns, driven by the growing share of weather-dependent renewable energy ...

Compared to December 2023, at the end of December 2024, the installed capacity of renewable energy sources increased to 33.6 GW, i.e. by 18.2%. Moving from the general to the ...

In June 2025, all renewable energy sources (RES) in Poland produced 44.1 per cent of electricity, while coal and lignite plants produced 43.7 per cent, according to preliminary estimates ...

Increased Penetration of the Polish Power Supply System by renewable sources (RES) leads to a number of serious and new problems.

Warsaw is also implementing numerous projects to increase the energy efficiency of buildings and promote renewable energy sources. New photovoltaic installations are being built in ...

The share of energy from renewable sources in gross final energy consumption in Poland has been increasing over the years and amounted to nearly 17% in 2023. Since 2018, the ...

Increased renewable energy penetration warsaw

In Poland, there is now a huge interest in energy storage in what is sometimes called the third wave of the energy transition.
