LCOS for battery storage in the US has declined enough recently to offset increases between 2021 and 2024, according to Lazard.

"DOD" denotes depth of battery discharge (i.e., the percent of the battery's energy content that is discharged). A 90% DOD indicates that a fully charged battery discharges 90% of its energy.

Overview of the operational parameters of selected energy storage systems for each use case analyzed. Comparative LCOS analysis for various energy storage systems on a \$/kW-year and \$/MWh basis. ...

In the flow battery space, this author would like to nudge the Lazard folks to consider adding an iron-oxide flow product from the likes of ESS or Form Energy on the wholesale and ...

Net "CONE" is defined as capital and operating costs less expected market revenues for a new, firm resource (e.g., gas peaker or battery storage). Net CONE is established by the respective balancing ...

This year's report shows sharp declines for battery energy storage systems across hybrid and standalone storage projects. Key drivers of such results include both market dynamics (e.g., ...

Lazard's Levelized Cost of Energy+ (LCOE+) is a widely-cited, annual analysis that provides insights into the cost competitiveness of various energy generation technologies.

In this section, flow batteries were considered - simply because we can't only talk about lithium-ion. Long duration storage does get its own discussion section later in the report, but the authors note ...

Lazard has published the 18th edition of its LCOE report and the 10th version of its LCOS. While fascinating, one drawback on the report is that it only covers the US, unlike BNEF's similar ...

Lazard's 2025 LCOE+ Report is organized around three key areas: Energy Generation, Energy Storage and
