What is live solar data?

Live solar data refers to real-time data of solar energy received per unit area at a specific location. Solcast live solar data covers a time frame from 7 days ago up to the present time, and is updated every 5 minutes. This data set is also referred to as "actuals" as it represents the modeled actual weather conditions at the location.

How does solcast's live solar data work?

Solcast's live solar data tracks real clouds at a resolution of 1-2km and 5 minutes. Our irradiance data and PV power data is updated every 5 to 15 minutes, downscaled to 90 metre resolution. Aerosol and albedo effects are explicitly treated.

What is the difference between live solar data and global weather data?

Live solar data spanning from 7 days ago to now, issued every 5 minutes, at 5 to 60 minute granularity, anywhere on Earth. Live cloud tracking provides high-resolution solar irradiance data, downscaled global weather data provides the most accurate actuals based on available data, as it becomes available.

How does solcast generate solar irradiance data?

Solcast's live solar irradiance data is generated using a combination of satellite observations and weather models. Solcast processes these data sources using advanced algorithm models that account for atmospheric conditions, such as cloud cover and aerosol levels.

Watch live while our E.W. Brown Solar Facility generates power. Learn more about its capabilities. Access comprehensive historical generation data.

The LIVE view is possible with the Company's PV monitoring platform, which leverages its nearly 300,000 monitored solar energy systems across the United States to track the path of the total solar ...

It typically includes solar panels, a battery pack, an inverter, and multiple output ports. Designed to deliver up to 500 watts of continuous power, this station can support a wide range of ...

One Step Off The Grid. Search. Tuesday, January 27, 2026.

Live broadcast about solar power generation

Whether you're a seasoned DIYer or just starting your journey into renewable energy, this series is packed with valuable knowledge to help you plan, install, and maintain your own solar ...

Over 2.3 million households globally now stream their solar panel performance publicly. Small-scale solar photovoltaic power generation live broadcasts aren't just tech novelties - they're becoming ...

In this exclusive production, the Trina team unveils the new power play for residential solar, providing a comprehensive overview and actionable insights for industry professionals to maximize...

Live Power provides real-time power generation and transmission data for better insights into power markets.

High-frequency live solar data and PV power data keep your control room ahead of changing conditions. Solcast Live streams "estimated actuals" for every point on Earth, covering the last seven days and ...
