Focusing specifically on environmental effects, [9] employed a process-based LCA approach for various renewable energy generation systems. The authors created a comprehensive ...

In the summer of 2025, Baja California, Mexico faced surging electricity demand from record heat and escalating grid constraints. National utility operators required immediate, reliable generation to ...

The aim of this paper is to evaluate the environmental and economic impact of the Electricity Generation Portfolios (EGPs) projected by Mexico's Secretariat of Energy (SENER 2018) ...

The National Strategy must be issued at the beginning of each new Presidential Administration and will set forth clean and renewable energy targets, based on minimum ...

Electricity generation must lead the way in Mexico's decarbonization, as availability of abundant low-carbon electricity will be key to decarbonize the broader Mexican economy. Generation will have to ...

This planning document is aligned with Mexico's National Development Plan 2019-2024, and it addresses electricity generation, transmission, distribution, and commercialization needs of the ...

Rapid growth in renewable energy deployment in Mexico could generate high levels of investment, increase energy access, reduce costs to consumers, and--together with other actions--improve the ...

The market is characterized by a growing demand for effective corrosion control solutions across sectors such as power generation, petrochemicals, manufacturing, and municipal water supply.

To do so, the CFE plans to develop 7 wind projects, 9 solar PV power plants (673 MW), 5 natural gas-fired CCGT power plants and one internal combustion project (240 MW) over a six-year period.

Mexico Anti-corrosion Containerized Power Generation

The Federal Electricity Commission (CFE) has approved a series of strategic investments totaling billions of dollars to modernize Mexico's power generation infrastructure.
