The exponential growth of population and the use of electronic and electrical equipment have increased the requirement for energy production management, thereby increasing the need for precise energy ...

This paper first reviews the recent progress and practical applications of self-powered, multi-parameter and micro sensor technologies for power metaverse and smart grids.

NIST Smart Grid Framework Report prepared by National Institute of Standards and Technology (NIST) and the Electric Power Research Institute (EPRI) Title: NIST Framework and Roadmap for Smart ...

Design of next-generation systems using smart sensors for micro-grids and energy storage. Architectures and algorithms for micro-grids and energy storage systems.

In this review, we introduce the conventional rigid microelectromechanical system (MEMS) based micro/nano sensors and energy harvesters, followed by presenting the advances in ...

The proceedings is divided into 03 volumes, and this volume focuses on adaptive control and intelligent sensors, wide-area measurements, and applications in the smart grid.

In this trend report, a comparative analysis between the current use of sensors and their future deployment is adopted to explore the untapped potential of sensors for enhancing the intelligence of ...

Part of an exciting journal, this section explores high-quality research related to fundamental and applied, as well as experimental and theoretical studies of both micro-sensors and ...

To improve the human-machine interaction experience of smart grids, this article applies micro/nano sensor technology to human-machine interaction optimization and proposes a data fusion model ...

Micro-nano sensors for smart grid applications

Discover the ever-growing field of smart grid sensors, covering traditional and state-of-the-art sensor technologies, as well as data-driven and intelligent methods for using sensor measurements in ...
