What is a smart microgrid demonstration system?

The smart microgrid demonstration system features a 100 kW/400 kW h energy storage solution based on three equally sized vanadium flow batteries. It also includes 150 kW of solar PV capacity.

What is the \$10 million microgrid demonstration initiative?

The \$10 million microgrid demonstration initiative (MDI) supports the development and implementation of microgrid demonstration projects. These projects address key microgrid sector challenges. They also contribute to the unlocking of the microgrid sector in Victoria. The MDI grant program funding supports statewide microgrid projects.

How does a microgrid power a remote environmental research station?

For more than 10 years, a microgrid powers this remote environmental research station 24/7. This fully-integrated solution includes diesel generators, load banks, PV panels, and a battery storage system. The station's diesel consumption decreased 83% from its 2011 level despite rising energy demands.

Based on experience of the micro-grid demonstration project, this article introduces the structure of the micro-grid, analyzes the operation data of the micro-grid, and gives key points for designing.
