I'm searching for some symbol representing minimum that is commonly used in math equations.

Min means Minimum. So yes, it's a function that, taken two elements, gives you the minimum of those.

What is the difference between minimum and infimum? I have a great confusion about this.

The foundation of a successful home wind turbine system lies in its tower height. When it comes to minimum height requirements, you'll need to take into account several factors to guarantee ...

How tall does a wind tower have to be? A general guide is that the turbine should be a minimum of 30 feet above any trees or buildings within 300 to 500 feet.

The height of a wind turbine tower is a critical factor in determining the overall efficiency and power output of a wind turbine. Taller towers can capture stronger and more consistent winds, ...

We can search $[a, b]$ instead of all of $[a, ?]$ But we also know the extreme value theorem which says that every continuous function on a closed domain reaches a maximum ...

Turbine height depends on several factors including the rotor diameter, where a general guideline suggests a minimum height of 10 meters (30 feet) plus the length of a turbine blade above ...

A minimum cut of a connected graph G is a cutset of G with the smallest possible cardinality (this cardinality is called the edge connectivity of G). This second formulation is more ...

What is the difference between the minimum value and the lower bound of a function? To me, it seems that they are the same.

Minimum number of directed edges to contain every Hamiltonian cycle or its inverse [closed] Ask Question

Minimum height of wind power tower

Asked 18 days ago Modified 18 days ago

Wind Tower Height: As a general rule, small wind turbines should be located so that the lowest part of the rotor is a minimum height of 10 m (30 ft) above an obstacle within a 100 to 150 m (300 to 500 ft) ...
