It is published annually as a March special issue of the China Energy Policy Newsletter. The Summary summarises the annual statistics of China's energy and power supply and ...

In Q1, the combined power generation of wind and PV reached 536.4 billion kWh, accounting for 22.5% of the total electricity consumption in society, an increase of 4.3 percentage ...

Despite the Trump administration's wide-ranging attacks on renewables like wind and solar power, the clean-energy industry is on pace for record growth this year, according to ...

China's combined installed capacity of wind and solar power crossed 1,800 GW for the first time last year, continuing to widen the gap with thermal power, which is dominated by fossil fuels. ...

Renewable sources--wind, solar, hydro, biomass, and geothermal--accounted for 22% of generation, or 874 billion kWh, last year. Annual renewable power generation surpassed nuclear ...

China's wind and solar power installed capacity totaled 1,840 GW at the end of 2025, according to data released by the National Energy Administration yesterday.

According to the National Energy Administration's forecast, the share of installed capacity of non-fossil energy will increase to about 55% in 2024, and the share of wind and solar power generation will ...

China's solar generating capacity is expected to surpass coal for the first time this year, according to the country's top electricity industry group, marking a milestone in the country's ...

To understand future renewable energy deployment on federal lands, researchers created seven scenarios with a wide range of possibilities. For each scenario, they used a power ...

National Energy Administration Wind Power Photovoltaic Power Generation

The extra layer of scrutiny for wind and solar contrasts with actions by the Trump administration to make it easier and cheaper for companies to produce oil, coal, gas and nuclear power.
