In 2011, with the goal of lowering its overall operating costs, Broward County began investigating ways to better process fats, oils, and grease (FOG) and leverage cogeneration technologies at its ...

Scalability: Solar-powered plants can be scaled up or down according to the capacity required, making them flexible to adapt to different wastewater treatment needs.

This study evaluated the effectiveness of a solar-powered Wastewater Treatment Plant (WWTP) integrated with a water filtration system in improving water quality.

Upgrade to an off-sewer, off-energy grid modular wastewater treatment. Augment an existing system, add redundancy to your infrastructure, or provide sanitation where needed with minimal operating ...

Mission Resilience: Onsite backup generation, energy storage, biogas to energy and microgrids are types of Distributed Energy Resources (DER) that can provide onsite power to a Water or ...

Southern Water pioneers off-grid wastewater treatment, powered by solar, wind, and battery storage. Learn how this innovative approach reduces carbon emissions and operational costs, setting a new ...

This study addresses this issue by designing a hybrid off-grid system for the Ariel University Dormitory WWTP, a 500 m³/day biofilter facility. The system integrates solar energy, ...

Designed to offset the annual electricity demand at the EWWTP facility, the solar and storage system increases overall energy efficiency while lowering utility bills. Over its 20-year lifespan, the system is ...

In this research project, the energy requirements of a waste water treatment plant were calculated and how big of a solar farm is required to completely neutralize the energy requirements of a WWTP.
