What is the difference between a charging pile and charging station?

A charging pile is a single charging unit for one vehicle, but a charging station consists of multiple charging units to cater to multiple vehicles. Charging stations typically have more complex infrastructure, including energy management, monitoring systems, and additional amenities.

What are charging piles?

Charging piles, also known as electric vehicle supply equipment (EVSE), refer to standalone units designed specifically for recharging electric vehicles. They can be found in various settings such as residential areas, commercial buildings, and public locations like parking lots or along roadsides.

How much power does a charging pile have?

Power Output: Charging piles typically offer a power output ranging from 3 kW to 22 kW depending on their specifications and intended usage. **Connectivity Options:** These units often come equipped with multiple connectivity options such as Type 1 or Type 2 connectors to cater to different types of electric vehicles.

How fast does a charging pile charge?

Charging Speed: The charging speed provided by charging piles may vary depending on the power output capacity of the unit, but it is generally slower compared to fast-charging stations.
