As a Washington state joint operating agency, Energy Northwest comprises 28 public power member utilities from across the state serving more than 1.5 million ratepayers.

We're building pilot projects at various locations that are designed to test different types of solar-related technology to further our knowledge of how this generation can be integrated into our electricity ...

In our STEO forecast, utility-scale solar is the fastest-growing source of electricity generation in the United States, increasing from 290 BkWh in 2025 to 424 BkWh by 2027. Almost 70 ...

This is a subset of the Power Generation Map to more clearly show relative capacity of solar projects. Choose projects from map or by name:

View our portfolio of hundreds of operating and development solar, wind, and storage projects across the United States.

This visualization shows wind and solar energy generation in the four Northwest states from 2000-2022. In the Northwest, wind energy generation has increased significantly more than solar energy ...

Concentrating solar power (CSP) projects in United States are listed below alphabetical by project name. You can browse a project profile by clicking on the project name.

But the Northwest is lagging in installing the most promising type of distributed solar infrastructure: midsize projects in the range of 1-5 MW. Idaho and Washington are especially behind.

Explore Energy Northwest's energy projects delivering clean, reliable, and carbon-free power across the Pacific Northwest. Learn about nuclear, solar, wind, and hydroelectric solutions driving a sustainable ...

Solar Power Generation Project Northwest

Sheep are good at moving around solar panels to eat grass and weeds, limiting vegetation growth and cutting down on wildfire risks during the Pacific Northwest's hot and dry summers. This ...
