Do you provide O&M services for solar systems?

We provide O&M services for all solar systems--including rooftop and ground mount systems. Since 1987, we have provided full service preventive maintenance on systems. In 2017, our technicians have commissioned and maintained over 114MW of utility scale solar systems all over the country.

What are the different types of solar O&M services?

There are generally three types of solar O&M services: a dedicated O&M provider, an installer-supplied O&M, and inverter monitoring solutions. A dedicated O&M provider is a third-party company (not your solar installer or equipment manufacturer) that you hire to monitor and maintain your solar panel system.

Do you need a solar operations & maintenance plan?

If you're looking for extra peace of mind, one upgrade to consider is a solar operations and maintenance (O&M) plan. O&M plans are protection plans for your solar panel system. They're almost like having health insurance for your solar panels. If a tree falls on your house, your homeowners' insurance plan will likely cover most of the repair costs.

How can O&M services help a solar plant?

Providing transparency about your plant's power production, performance, issues, risks and O&M activities allows you to translate how your solar plant's energy production translates into the appropriate revenue stream. Your new solar home awaits. O&M Services Redefining how energy is managed and maintained.
