Next year, solar photovoltaic capacity will leapfrog that of ...

Solar power will lead electricity generation growth in the next two years, according to new data from the U.S. Energy Information Administration. What's going on: Electricity generation from ...

Next year, solar photovoltaic capacity will leapfrog that of hydropower, according to the International Energy Agency. In three years, it will overtake gas-fired generation. And, in four years,...

The Outlook forecasts that nearly 70 GW of new solar generating capacity projects are scheduled to come online in 2026 and 2027, which will amount to a 49% increase in U.S. solar ...

The US Energy Information Administration (EIA) projects that solar power will lead the growth in US power generation through 2027.

Electricity from wind and solar will increase by more than double over the next five years, accounting for over 20% of global power generation in 2027. The report stated that these variable ...

Solar power is expected to add nearly 70 gigawatts of new capacity through 2027, boosting generation by over 20% annually. Wind will see more gradual gains, while coal-fired output continues ...

The US Energy Information Administration reports that US electricity generation totaled about 4,260 billion kilowatthours in 2025 and is projected to grow steadily through 2027, reaching ...

According to the latest U.S. Energy Information Administration (EIA) data, solar electricity generation, installed capacity, and overall solar energy consumption are projected to grow ...

The IEA expects global PV module generation to increase by 1,800 TWh per year between 2025 and 2027, causing solar to become the second-largest renewable energy source after ...

Solar power generation in 2027

In our STEO forecast, utility-scale solar is the fastest-growing source of electricity generation in the United States, increasing from 290 BkWh in 2025 to 424 BkWh by 2027. Almost 70 ...
