-----

In this paper, we demonstrate a compact, chip-based device that allows for direct storage of solar energy as chemical energy that is released in the form of heat on demand and then converted into ...

Conceptual diagram of on-chip solar cells and energy harvesting system forming an on-chip power source to power single-chip smart microsensors.

Herein, a power device to simultaneously harvest energy from the sun and cold space based on a microfabricated thermoelectric generator (TEG) integrated with a solar absorber (SA) and...

Here, we report a combination of solution- and neat-film-based molecular solar thermal (MOST) systems, where solar energy can be stored as chemical energy and released as heat, with ...

The on-chip solar cells and energy harvesting systems form an on-chip power source that provides a stable, adapted working voltage to the application modules under certain lighting...
