Included will be a base station that they plug into for charging when not in use. In addition to charging, I would like this base station to control transferring firmware updates to the attached devices, as well ...

Open your serial monitoring console within STM32CubeIDE and connect your Nucleo board. Make sure you set the correct baud rate. If you initialized your STM32CubeIDE project with ...

STM32 inter-processor communication channels This section presents general information about inter-processor communication libraries available with the STM32CubeH7 firmware: OpenAMP and ...

In this article, we implement a basic inter-processor communication channel technique using STM32H7 Series hardware resources, such as using a communication/synchronization protocol.

In this article, we explore how to use the FDCAN peripheral to communicate between two STM32 Nucleo boards. There are many different filter configurations available in the CAN protocol.

Controller Area Network or CAN is a single BUS communication type that allows devices (known as Nodes or Masters) to communicate with each other without the need of a host to send messages ...

In this guide, we'll explore how to implement SPI communication on STM32 microcontrollers, which feature robust SPI peripherals that make interfacing with external devices straightforward.

Both boards support data transfer by sending L2CAP data through a COC (Connection Oriented Channel) link. Open VT100 terminals on client and server sides. No service is added. Once a ...

Included will be a base station that they plug into for charging when not in use. In addition to charging, I would like this base station to control transferring firmware updates to the attached ...

This guide gives you an overview of the available hardware and software for working with STM32

Stm32 communicates via base station

microcontrollers. Also, it will briefly introduce you to the STM32 family of microcontrollers.

The STM32-base project is meant for students and hobbyists. The goal of the STM32-base project is to provide a simple and easy to use base project for working with STM32 microcontrollers.
