2 Energy Storage in Superconducting Magnetic Systems
3 Superconductive Materials
The magnetic energy of materials in external H fields is dependent upon the intensity of that field. If the H field is produced by current passing through a surrounding spiral conductor, its magnitude is proportional to the current according to Eq. (7.28). It is obvious that high currents are desirable if one wants to store large amounts of energy....See more on link.springer.com/news_dt{color:#767676}ScienceDirectMagnetic Energy Storage - an overview | ScienceDirect
