-----

Our first research and development of uninterruptible power supplies date back to the 1950s. We completed a prototype in 1954 and exhibited it in various venues.

Then, in the HX Series released in 2011, we further increased the efficiency to as much as 97%, which was one of the highest in the industry, by employing the new three-level power ...

When grounding cannot be verified, disconnect the equipment from the utility power outlet before installing or connecting to other equipment. Reconnect the power cord only after all connections are ...

Our UPS data center solutions use cutting-edge 3-Level technology that improves power efficiency by up to 97.5%, helping you reduce energy consumption and save money in the process.

The Liebert® EXS UPS delivers simplicity, reliability and efficiency in a compact three phase power solution. The integrated design and reduced footprint provides maximum power capacity.

This standard outlines the basic requirements for uninterruptible power supply (UPS) equipment rated up to 600 volts, encompassing crucial aspects such as operational safety, testing procedures, and ...

In 1975, we developed a system for synchronous uninterruptible switching of commercial power supply as a backup circuit, for which we won the Progress Award from the Japan Electrical ...

The world's first UPS o In 1950s, the first uninterruptible power supply equipment (known as no-break power supplies) were of rotary design.

# The first calibration solution for uninterruptible power supply for solar container communication stations

Explore the evolution of uninterruptible power supplies, from early flywheel systems to today's smart UPS tech. Learn how it started and why it matters.

The primary goal of the Network UPS Tools (NUT) project is to provide support for Power Devices, such as Uninterruptible Power Supplies, Power Distribution Units, Automatic Transfer Switches, Power ...
