What are the UK's solar policies?

Policies include updating the Contracts for Difference (CfD) scheme, a safety review of plug-in solar for balconies and rooftops, consulting on car park solar, and engaging with industry on skills and training. The UK government has published a solar roadmap setting out the steps it will take to secure 47 GW deployed capacity by 2030.

Will the UK achieve 47 GW of solar capacity by 2030?

The UK government has published a solar roadmap setting out the steps it will take to secure 47 GW deployed capacity by 2030. Image: Nick Fewing, Unsplash The UK government has published a new "Solar Roadmap" policy paper setting out how it plans to achieve 45-47 GW of deployed solar capacity by 2030, from nearly 19 GW as of May 2025.

What is the role of solar power in the UK?

Solar power has a growing role in electricity production in the United Kingdom, contributing around 6.4% of the UK's annual power generation in 2025. As of 2025, on sunny days, it provides over 30% of the UK's power consumption at times. Solar generation reached an all-time high of 14,035MW at 13:00 on 8 July 2025.

Are there any UK government schemes for solar panels?

There are no UK Government schemes, similar to the Boiler Upgrade Scheme, to help with the cost of solar panels. But the UK Government will work with the financial and solar industries to provide low-cost lending options for solar panels. These options might include personal loans and solar panel leasing.

The UK government has published a new "Solar Roadmap" policy paper setting out how it plans to achieve 45-47 GW of deployed solar capacity by 2030, from nearly 19 GW as of May 2025.

The UK Solar Roadmap issued by the UK Government and produced through collaboration with industry presents a comprehensive strategy and clear plan of action to achieve the ...

It outlines how the UK Government plans to deliver around 47 gigawatts (GW) of solar energy by 2030 as part of its Clean Power Plan. The roadmap outlines several action points that it ...

UK household solar power generation policy

The Solar Roadmap, produced through collaboration with industry, presents a comprehensive strategy and clear plan of action to achieve the significant increase in solar deployment needed to support the ...

From autumn 2025, new homes will be required to include rooftop solar as standard. The government is also considering new rules to allow plug-in balcony panels that renters and flat ...

The Solar Roadmap details government and industry actions that will be delivered to radically increase the deployment of solar in all its forms across the UK.

In December 2024, the government published its Clean Power 2030 Action Plan, which set how it intends to meet the 2030 target. This included a target for the installation of 45-47 gigawatts (GW) of ...

The 2027 solar mandate for mandatory solar panels on new homes represents a significant shift in UK housing policy, with far-reaching implications for sustainability, energy ...

Solar energy is among the lowest cost, and most popular, forms of power generation in the UK, and unlocking its potential will increase Britain's energy security, drive down bills as well...

OverviewSolar potentialHistoryRooftop solarLarge-scale solar farmsPlanning considerationsGovernment programmesFutureSolar power has a growing role in electricity production in the United Kingdom, contributing around 5% of the UK's annual power generation in 2024. As of 2025, on sunny days, it provides over 30% of the UK's power consumption at times. There were few installations until 2010, when the UK government mandated subsidies in the form of a feed-in tariff (FIT), paid for by all electricity consumers. In the followin...

Solar power has a growing role in electricity production in the United Kingdom, contributing around 6.4% of the UK's annual power generation in 2025. [1][2] As of 2025, on sunny days, it provides over 30% ...
