Solar panels gleaming on rooftops have become a common sight across America, but a nagging question persists in many homeowners' minds: can these electrical systems actually catch ...

New findings from Colorado State University reveal that while wildfire smoke increasingly blankets vast areas of the United States, its impact on long-term solar power generation remains relatively minimal.

New research from Colorado State University shows that while wildfire smoke increasingly covers large parts of the U.S. it does not have much of an impact on overall, long-term solar power ...

With the continued increase in solar installations throughout the U.S., many questions have come up regarding solar photovoltaic (PV) systems and fire safety. While properly installed systems by ...

The wildfire smoke that often wafts across the U.S. West may only be causing minimal disturbance to the output of photovoltaic solar panels, a new study has found.

The wildfire smoke that often wafts across the U.S. West may only ...

Solar fires remain statistically rare, but they're increasing faster than the technology is spreading. Installation quality matters more than most people realize, and ongoing maintenance...

Climate change is creating a longer and more severe wildfire season across the U.S., motivating researchers to examine the impact of wildfire smoke on solar photovoltaic systems, said...

New research from Colorado State University shows that while ...

Growing threats from wildfires, extreme weather and equipment-related risks make proactive risk management necessary for solar farms. However, damages can still occur despite standard ...

US Solar Power on Fire

Wildfires spewing smoke across much of the southwest United States are denting solar power output in the country's largest solar producer just as power demand peaks due to heavy use of ...

Key Takeaways U.S. government data on the number of solar panel fires in the U.S. appears to be thin. One quantitative analysis suggests there may be about .03 fires per MW of solar ...
