---

Although there has been a significant increase of approximately 22% in global solar energy installed capacity between 2021 and 2022, the literature survey reveals that clear gaps still ...

Find up-to-date statistics and facts on the solar photovoltaic industry in the United States.

Residential solar use is expected to grow at an average of 6% annually over the next five years. All renewable energy sources combined generated 30.2% of the world's electricity in 2023.

The full report, A Decade of Growth in Solar and Wind Power, goes into more detail about state-level trends in utility- and small-scale solar. Download the data to see where your state ranks.

We've gathered over 90 key solar energy statistics to show you exactly what's happening in this fast-growing sector. Our data comes from trusted sources. These include IEA, SEIA, Forbes, ...

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest ...

Percentage change in solar energy generation relative to the previous year. Figures are based on gross generation and do not account for cross-border electricity supply. Energy Institute - ...

Solar electric power generation created 17,212 jobs last year, which was a 5.4% increase, according to the latest data from the US Department of Energy. A further 4,085 jobs were ...

As of 2023, most commercial panels have efficiencies between 17% and 20%, but researchers have developed PV cells that are nearly 50% efficient. Solar technology is becoming ...

Solar has added the most generating capacity to the grid for the last five years. It accounted for 53% of new

# What is the proportion of solar power generation over the years

generating capacity in 2023, the first time in 80 years that a renewable energy resource was a ...
