This article provides a decision framework to help farmers choose crops that thrive under solar panels, ensuring the best balance between agricultural yield and energy efficiency.

Carrots, beets, and radishes, alongside other root vegetables, often improve when growing underneath solar panels. These crops require consistent soil conditions, such as stable soil temperatures and ...

Establishing pollinator-friendly plants under and around ground-mounted solar arrays has the potential to provide this critical habitat and benefit both the pollinators and nearby agriculture.

A variety of plants can thrive between solar panels, including native ground covers, drought-resistant species, herbs, and vegetables, as they provide multiple benefits such as ...

Jack's Solar Garden in Longmont, Colorado, is host to 3,276 panels that provide enough power for over 300 homes. Under the panels, you will find around 15 different crop varieties being ...

Planting trees near your solar panels can offer numerous benefits without compromising energy production. You'll enhance your property's aesthetics, improve energy efficiency, and create ...

Japanese tea producers have been among the pioneers in this field, developing systems that maintain traditional quality standards while embracing renewable energy production. This table ...

On a humid, overcast day in central Minnesota, a dozen researchers crouch in the grass between rows of photovoltaic (PV) solar panels. Only their bright yellow hard hats are clearly visible ...

One solution that has gained popularity is planting vegetation--with an emphasis on native and flowering plants--between rows of solar panels. This dual use of land bolsters pollinator ...

What plants to plant between photovoltaic panels

Research indicates that shade-tolerant crops, particularly C3 plants adapted to lower light compensation points, exhibit promising performance under varying degrees of panel shading.
