Even though the federal solar tax credit has officially expired, experts at EnergySage say the long-term savings still make solar panels a great investment.

The federal solar tax credit ends after December 31, 2025. That means solar panels will no longer be a viable investment for homeowners, right? Wrong. It's still one of the smartest long ...

Yes, solar panels are still worth it for the vast majority of U.S. homeowners in 2026 and beyond, despite the end of the 30% federal solar tax credit for some systems. The primary financial driver is the cost ...

Inexpensive panels are good for developers and consumers because projects cost less. But businesses that make and sell panels are having a rough time, especially those that had a lot of ...

Between 2020 and 2023, the residential solar market experienced unsustainable growth, with 30% per year rates. This surge came from factors like gas supply disruptions in Europe, policy ...

Analyzing millions of transaction-level data points from homeowners on EnergySage, it highlighted a clear milestone for solar panels: The average price had dropped 30% year-over-year in ...

In many markets, households can still generate savings by installing rooftop solar. Including all costs of installing a solar rooftop, the electricity generated over its lifetime--the ...

US residential solar stays cheap in the first half of 2025, but tariffs, rates, and policy shifts brought headwinds for contractors.

Calculate when your solar panels will break even. Free calculator + expert guide covering payback periods, costs, and savings by state. Updated 2025.

As panel efficiency continues to improve and installation costs decrease, the financial advantages of solar

Will photovoltaic panels still lose money

power become even more attractive. End-of-life considerations, including ...
