For the first time on record, renewable energy sources like wind and solar produced more electricity than coal in the first half of 2025, marking a major milestone in the global transition...

CLIMATEWIRE | Wind and solar generated more electricity than coal through May, an E& E News review of federal data shows, marking the first time renewables have outpaced the former ...

According to a report by climate think tank Ember, wind and solar power together outpaced coal generation in the first half of 2025, driven largely by record solar expansion and steady...

Last year wind and solar produced around 16 percent of U.S. power, slightly outstripping coal, according to a preliminary analysis from the Rhodium Group. The amount of power supplied by ...

For the first time, renewable energy has overtaken coal as the primary source of electricity around the world, a new report says, indicating a shift in the global reliance on environmentally...

Worldwide solar and wind power generation has outpaced electricity demand this year, and for the first time on record, renewable energies combined generated more power than coal,...

Electricity generation from wind established a new record in the United States in April, and wind generation exceeded coal-fired generation in both March and April, data from our July 2024 ...

In the US in 2024, wind and solar accounted for 17% of total electricity generation, surpassing coal, which fell to a record low of 15%, according to a new report from global energy...

The world's wind and solar farms have generated more electricity than coal plants for the first time this year, marking a turning point for the global power system, according to research.

Wind and photovoltaic power generation exceeds coal-fired power

CLIMATEWIRE | Wind and solar generated more electricity than ...

Worldwide solar and wind power generation has outpaced electricity demand this year, and for the first time on record, renewable energies combined generated more power than coal, according to a new ...
